Thank You for Being a Salesforce Customer

Forward-Looking Statements

Statement under the Private Securities Litigation Reform Act of 1995:

This presentation may contain forward-looking statements that involve risks, uncertainties, and assumptions. If any such uncertainties materialize or if any of the assumptions proves incorrect, the results of salesforce.com, inc. could differ materially from the results expressed or implied by the forward-looking statements we make. All statements other than statements of historical fact could be deemed forward-looking, including any projections of product or service availability, subscriber growth, earnings, revenues, or other financial items and any statements regarding strategies or plans of management for future operations, statements of belief, any statements concerning new, planned, or upgraded services or technology developments and customer contracts or use of our services.

The risks and uncertainties referred to above include – but are not limited to – risks associated with developing and delivering new functionality for our service, new products and services, our new business model, our past operating losses, possible fluctuations in our operating results and rate of growth, interruptions or delays in our Web hosting, breach of our security measures, the outcome of any litigation, risks associated with completed and any possible mergers and acquisitions, the immature market in which we operate, our relatively

limited operating history, our ability to expand, retain, and motivate our employees and manage our growth, new releases of our service and successful customer deployment, our limited history reselling non-salesforce.com products, and utilization and selling to larger enterprise customers. Further information on potential factors that could affect the financial results of salesforce.com, inc. is included in our annual report on Form 10-K for the most recent fiscal year and in our quarterly report on Form 10-Q for the most recent fiscal quarter. These documents and others containing important disclosures are available on the SEC Filings section of the Investor Information section of our Web site.

Any unreleased services or features referenced in this or other presentations, press releases or public statements are not currently available and may not be delivered on time or at all. Customers who purchase our services should make the purchase decisions based upon features that are currently available. Salesforce.com, inc. assumes no obligation and does not intend to update these forward-looking statements.

Agenda

Accelerator Webinar

- **Overview**

What challenge are we solving for you?

- **Your Account**

Learn and walk through account settings.

- **Users, Permissions & Roles**

Learn and walk through adding users, roles and ongoing user management.

- **Security Settings**

Learn and walk through security settings

- **Deliverability Fundamentals**

Learn what impacts deliverability.

- **Deliverability Best Practices**

Learn about best practices.

- **Marketing Cloud Deliverability Features**

Learn and walk through features available in Marketing Cloud to help your deliverability practice.

- **Sending Administration**

Prepare your account with user send classifications.

- **Resources & Next Steps**

Learn about other Resources and Accelerators to continue your progress.

Overview

What challenge are we solving for you?

What you can Expect from this Accelerator:

- Gain awareness of Marketing Cloud configuration and administrative settings.
- Learn best practices for managing users and adjusting general Marketing Cloud admin settings for day-to-day account administration.
- Gain awareness of deliverability fundamentals and the elements that affect your email delivery.
- Learn best practices for deliverability to start off down the right path to success.
- Understand deliverability capabilities available within Marketing Cloud to help you be successful.

Marketing Cloud Administration

Getting Started

Your Account

How to Use This Section

Slides and demos throughout this Delivery

Many slides in this delivery are simply the outline for discussion.

To help new users, you will be walking them through the basics of setting up their account.

We suggest you demo LIVE as much as possible.

When you see **“Walk with Me”** We suggest you demo the capabilities outlined directly in your account, while suggesting the the customer is following along in their own account.

Also note, customers with E2.0 accounts may have more available than other accounts. Slides have been noted for E2.0 only customers. This deck has been adjusted to reach all types of customers and use cases.

Your First Log-in

MarketingCloud.com

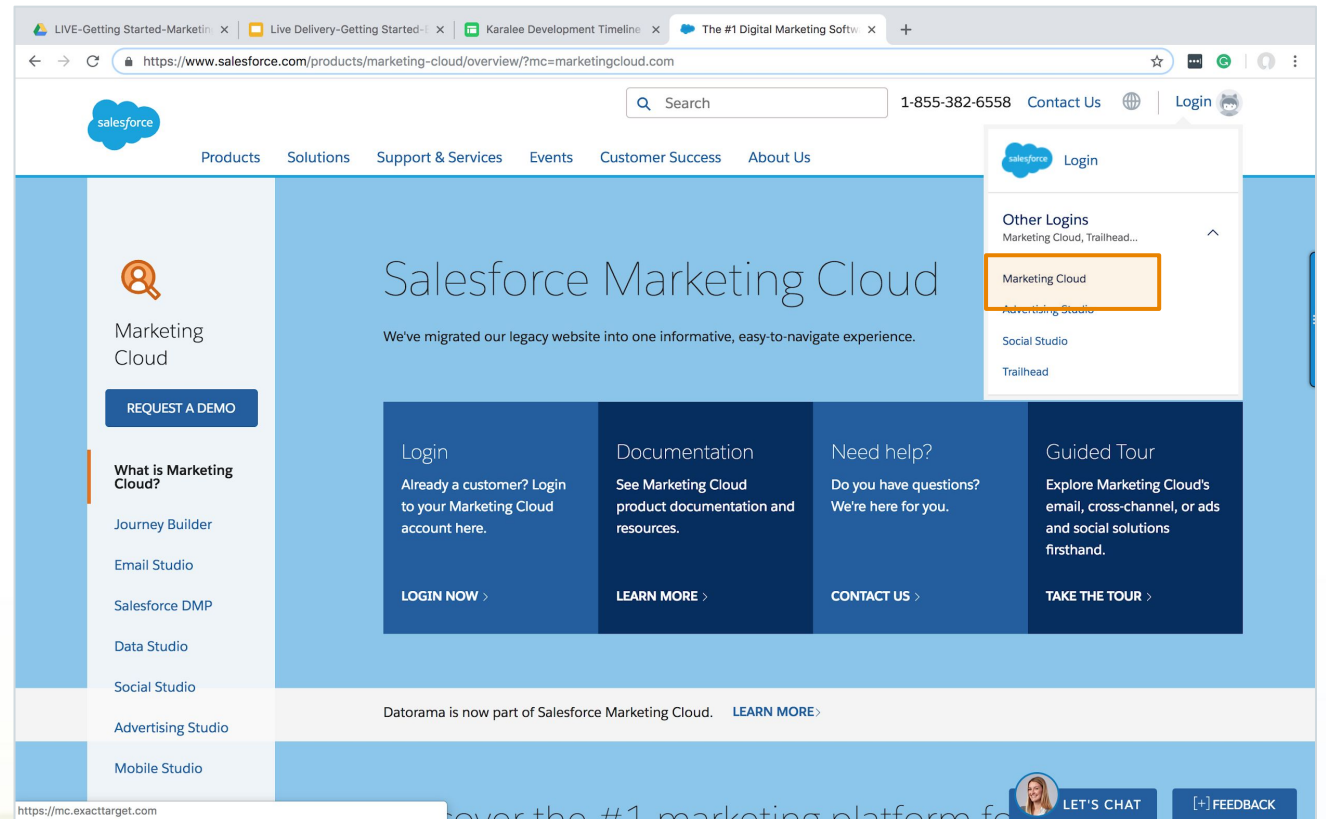

Login from the Salesforce.com website

The first time you login you will need to:

- Activate your account.
- Change your password.
- Set a challenge question.

The screenshot shows the 'Verify Your Identity' step. At the top, it says 'salesforce marketing cloud'. Below that, the heading is 'Verify Your Identity'. The text reads: 'You're trying to log in to Marketing Cloud. To make sure your account is secure, we have to verify your identity for this browser. Learn More'. There is a field for 'Enter the verification code we emailed to ks*****@*****ce.com'. Below that is a 'Verification Code' input field. A blue 'Verify' button is at the bottom. A 'Resend Code' link is at the bottom left.

The screenshot shows the 'Change Your Password' step. At the top, it says 'salesforce marketing cloud'. Below that, the heading is 'Change Your Password'. The text reads: 'Enter a new password for ks-sb-testing. You cannot use the previous 2 passwords. Your password must follow these rules:'. There are four bullet points: '8 characters', '1 letter', '1 number', and '1 special character'. There are three password input fields: 'Current Password', 'New Password', and 'Confirm New Password'. A blue 'Next' button is at the bottom.

Learn More about [Managing your password on First Login](#)

Marketing Cloud Dashboard

Orientation

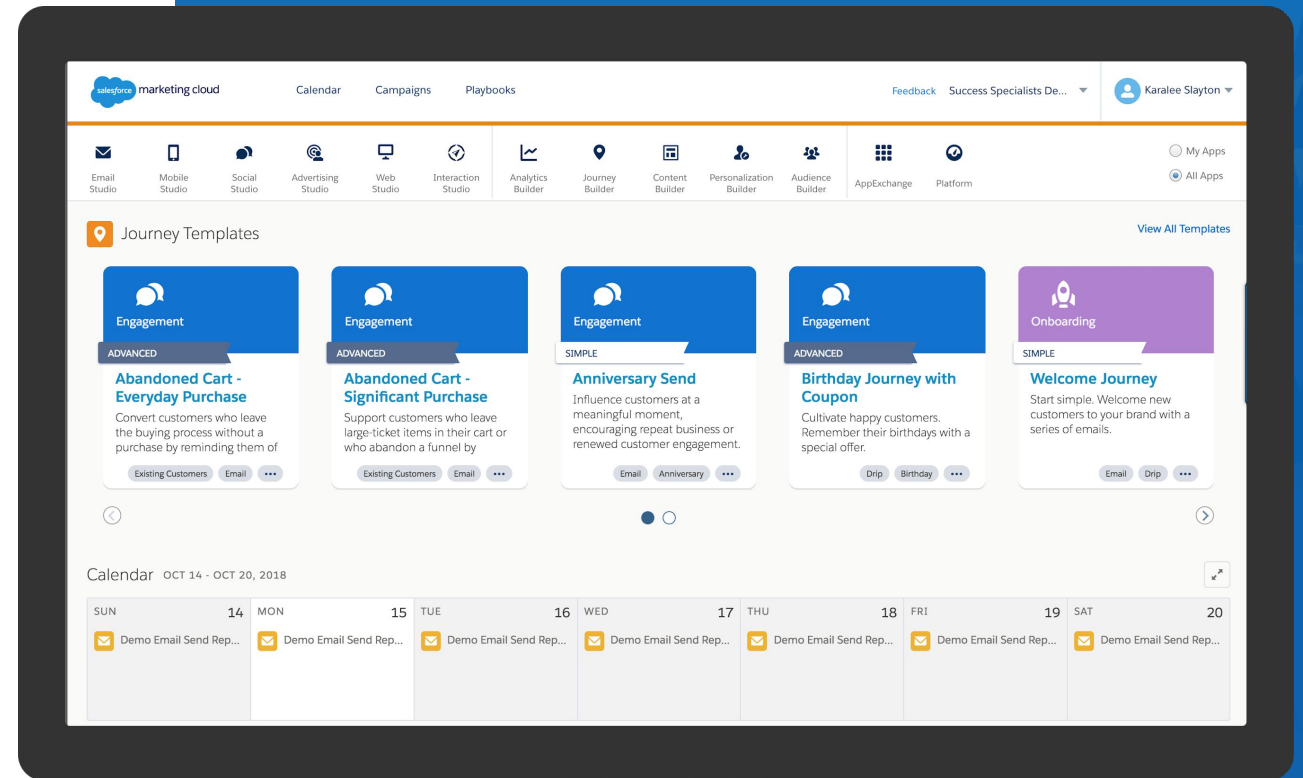

App Switcher - Applications grouped by Channel available in your account.

Journey Templates - A starting point for 1:1 messaging.

Calendar - Shows Scheduled interactions.

Cloud Preferences

- [Modify Marketing Cloud User Preferences](#)
- [Set Culture Code for Your Account](#)
- [Set Default Login Preference](#)

Account Settings

Control and modify key information regarding your account for you and your users.

Your Account Information

- Member Account ID (MID)
(You will need to know your MID when you are logging a case with Global Support.)

Marketing Cloud Settings

- Hide Apps and receive product alerts

General Settings

- [Domain Verification](#)
- [Supported Date Formats for Imports](#)
- [Marketing Cloud Time Zone Preferences](#)

Company Information

- Address to be displayed in your footer.

Learn More about [Managing your password on First Login](#)

The screenshot displays the Salesforce Account Settings interface. At the top, there are navigation tabs for Administration, Account, Security, Applications, and Data Management. A user profile for Karalee Slayton is visible in the top right corner. The main content area is divided into several sections:

- Account Settings:** Includes an 'Edit' button and a note: "Changes made in Account Settings will affect all users within this account unless a user overrides the default settings."
- Marketing Cloud Settings:**
 - Hide All Apps Option: off
 - Receive Product Alerts: on
 - Enable Social Studio: true
- General Settings:**
 - Account Name: Success Specialists Demo
 - Account ID: 8209136
 - Email Display Name: Success Specialists Demo
 - Email Reply Address: success.specialists@mktg.salesforce.com (Not Verified)
 - Portfolio Base URL: https://image.s8.exacttarget.com/lib/fe921c72756d057e73/m/1/
 - Number of Business Units: 4
 - Number of Active Users: 98
 - SOAP WSDL: https://webservice.s8.exacttarget.com/ETFramework.wsdl
 - SOAP Service Endpoint: https://webservice.s8.exacttarget.com/Service.asmx
 - Modified By: Kensuke Fujimoto
 - Time Zone: (GMT-07:00) Mountain Time (US & Canada) * (Note: * Indicates Daylight Saving Observation)
 - Date Format: English (United States) (Example: 10/15/2018 3:32 PM)
- Company Information:**
 - Company Name: Salesforce Marketing Cloud
 - Street: 36 S. Pennsylvania

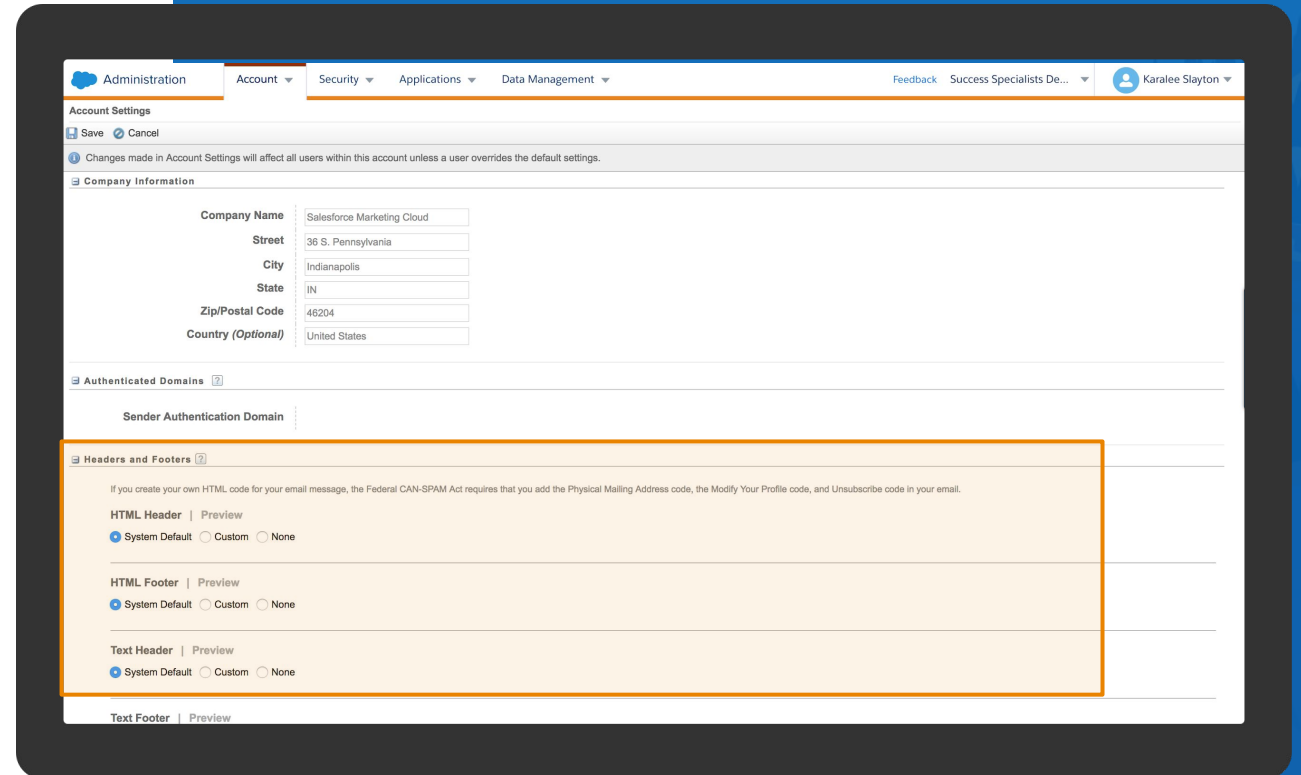

Headers & Footers

Ensure compliance with CAN-SPAM

Automatically add text and images to the beginning and end of your email messages to ensure compliance with CAN-SPAM regulations.

- System-default header and footer
- Custom header and footer specifically for that account
- No header and footer

You can set this information as part of the content in the email, the [send classification](#), or at an account level in Account Settings.

Learn More about [Modifying Headers & Footers](#)

Learn more about [CAN-SPAM in the Legal Compliance Trail](#)

FTP Accounts & File Locations

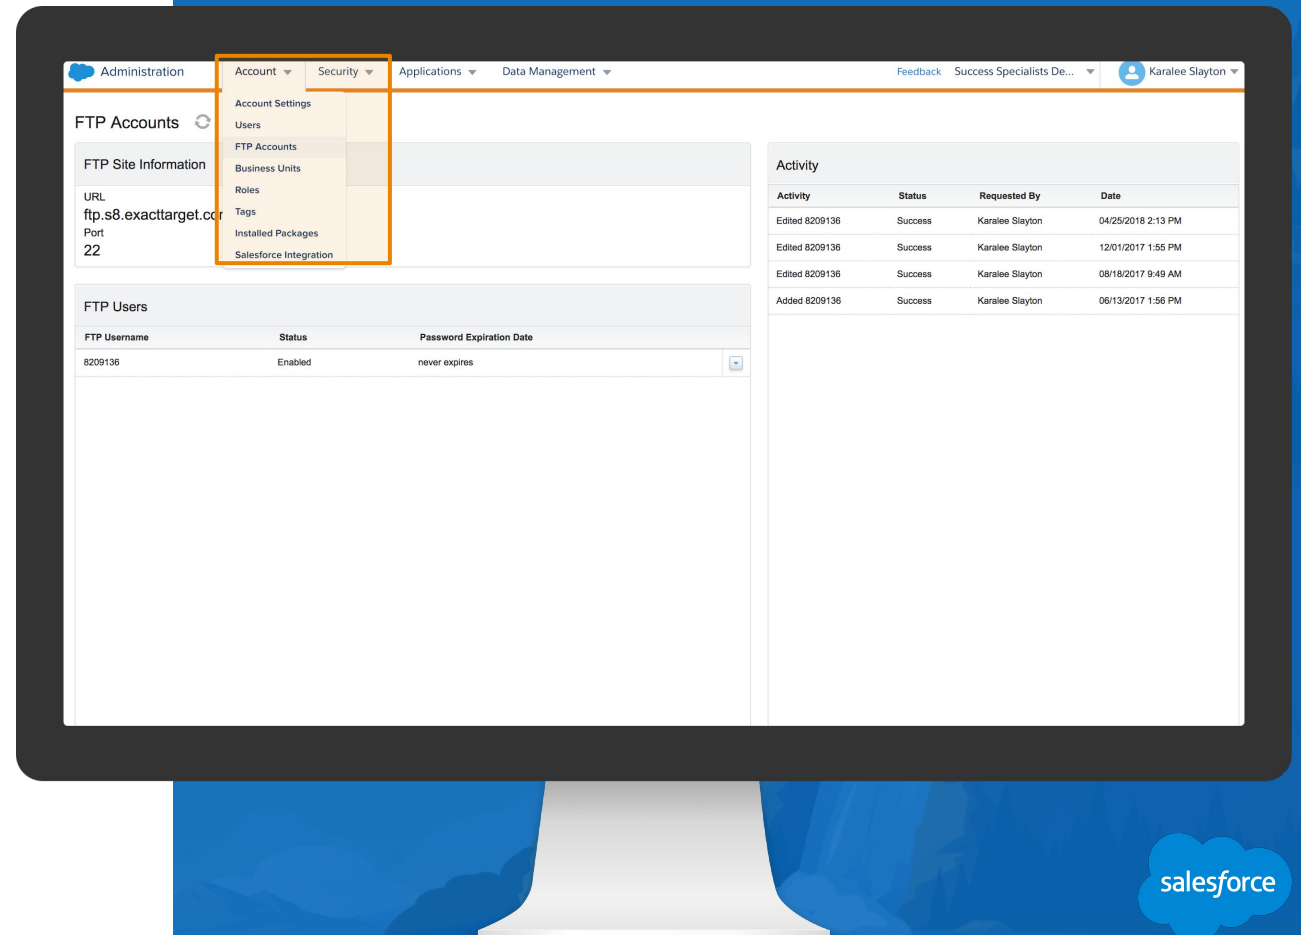

Save and Import content

FTP accounts allow you to assign FTP privileges within your Marketing Cloud account. Each account MID includes an individual status:

- Enabled
- Pending
- Locked

Marketing Cloud requires enhanced FTP for these tasks:

- Importing lists from the FTP server
- Exporting information from the application database to the FTP server
- Export any single file of information that is over 5 MB
- Running reports available in the Marketing Cloud
- Using the file retrieval activity
- Extracting data from the application database
- To post import results files

Business Units

Business units allow you to control access to information and sharing of information.

Use the hierarchical structure of business units to control your brand while enabling access.

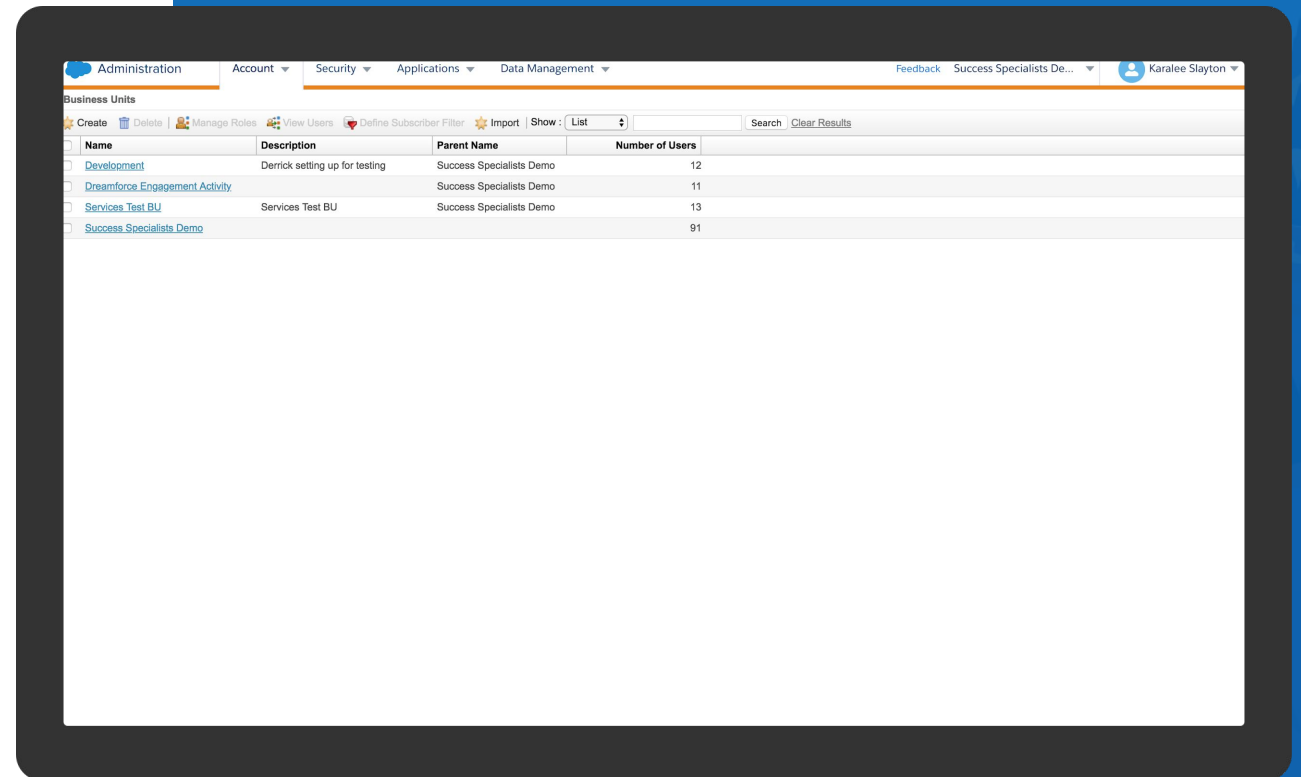

Organize the hierarchical structure of business units to match your business needs.

- Commercial messaging, by brand
- Business-to-business messaging
- Internal messaging

Business units can mirror workflow processes, demographic and behavioral data about your subscribers, or your organization's operational structure.

Separate business units are also used for added security in separating your customer data and access to it

Learn More about [Managing Business Units](#)

Your Users, Permissions & Roles

Understanding Users

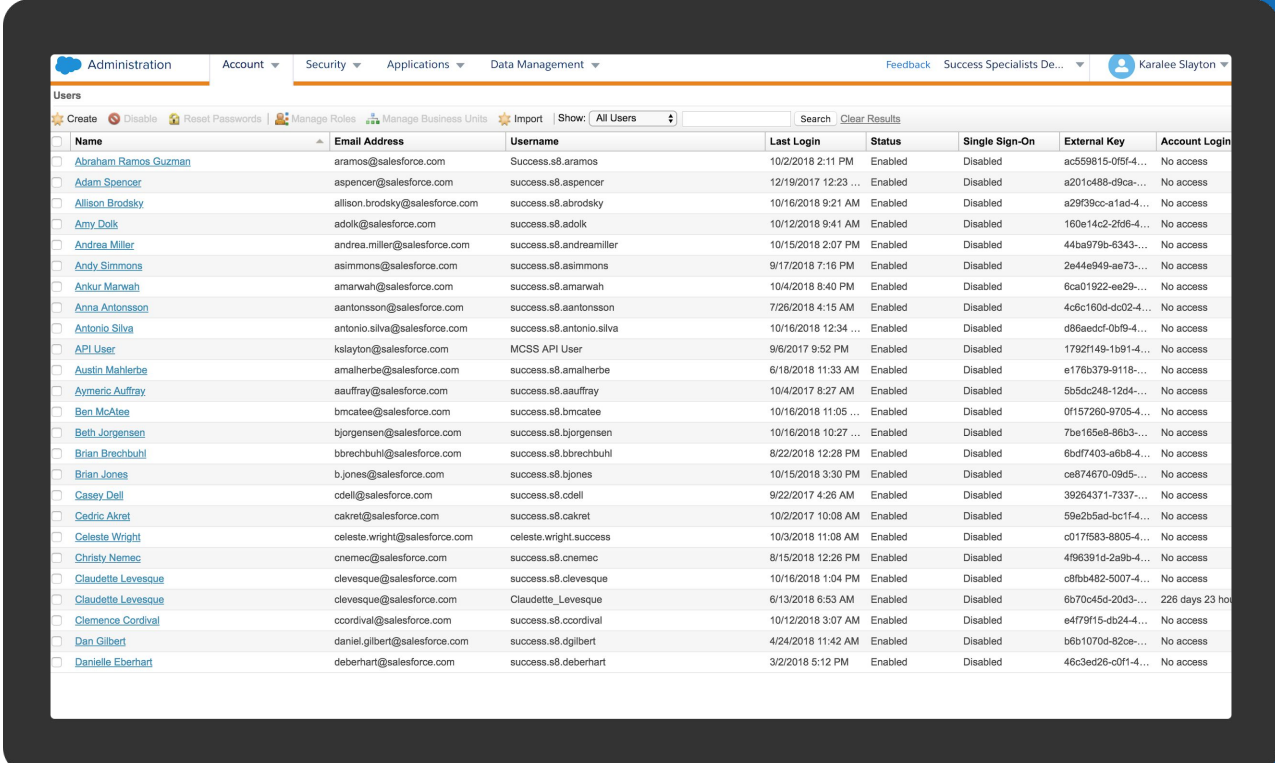

Granting Access to Marketing Cloud

To help protect assets in your account and prevent unauthorized access:

- Create one user per person, API process, and third-party system that you integrate with.
- Do not allow users to share usernames and passwords because it increases the likelihood of a compromised account.
- Give each user the least possible access to accomplish their tasks in the application.

Administrators can add users, modify user permissions, disable users* and reset passwords.

*Users can only be disabled, not deleted, to retain the integrity of data in your account associated with the user.

The screenshot shows the Salesforce Administration console with the 'Users' section selected. The interface includes navigation tabs for Administration, Account, Security, Applications, and Data Management. The 'Users' table lists various users with columns for Name, Email Address, Username, Last Login, Status, Single Sign-On, External Key, and Account Login. The table contains 25 rows of user data.

Understanding Permissions

Controlling Access

Control a user's access to applications, screens or specific functionality with permissions.

A permission can be set to:

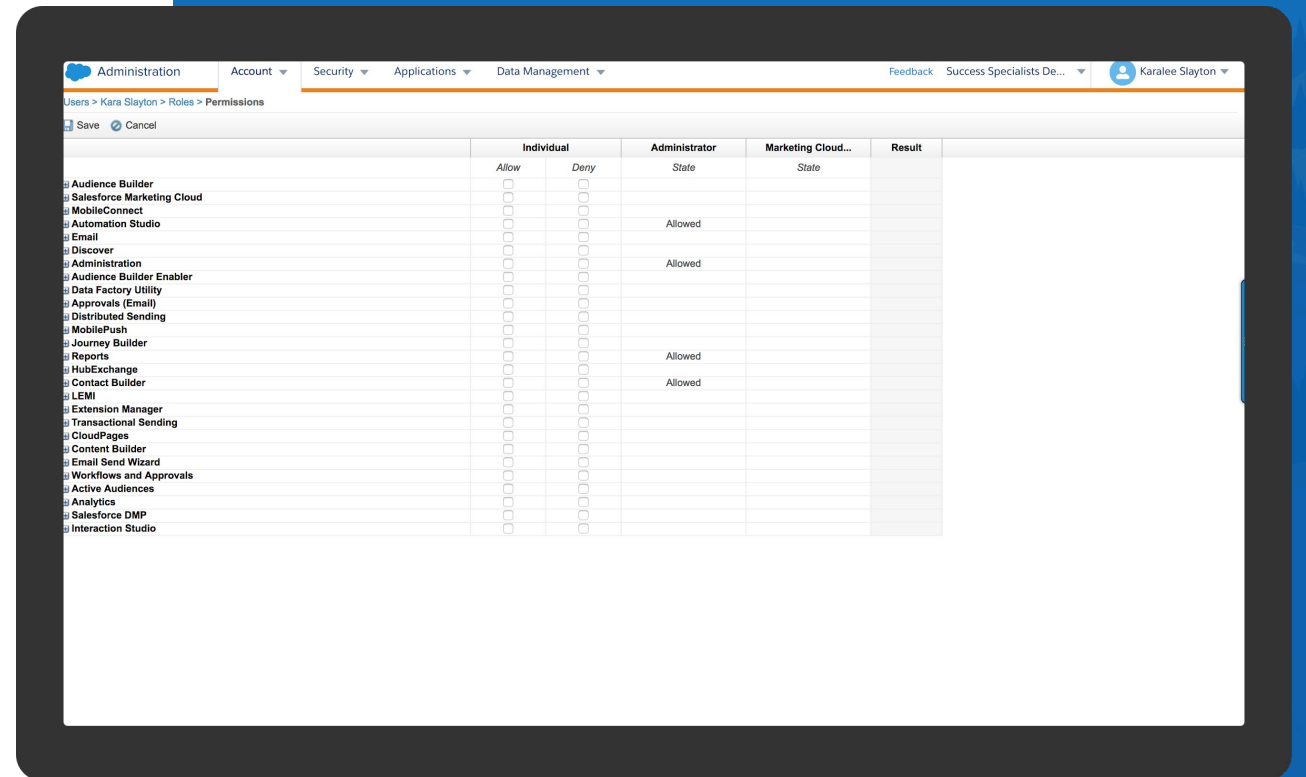

- Allow
- Deny
- Not Set

Permissions not set, is the same as being denied.

Permissions exist for everything a user can do in Marketing Cloud.

Roles are comprised of permissions..

*Note: Deny permissions always override allow permissions.

Understanding Roles

A collection of permissions

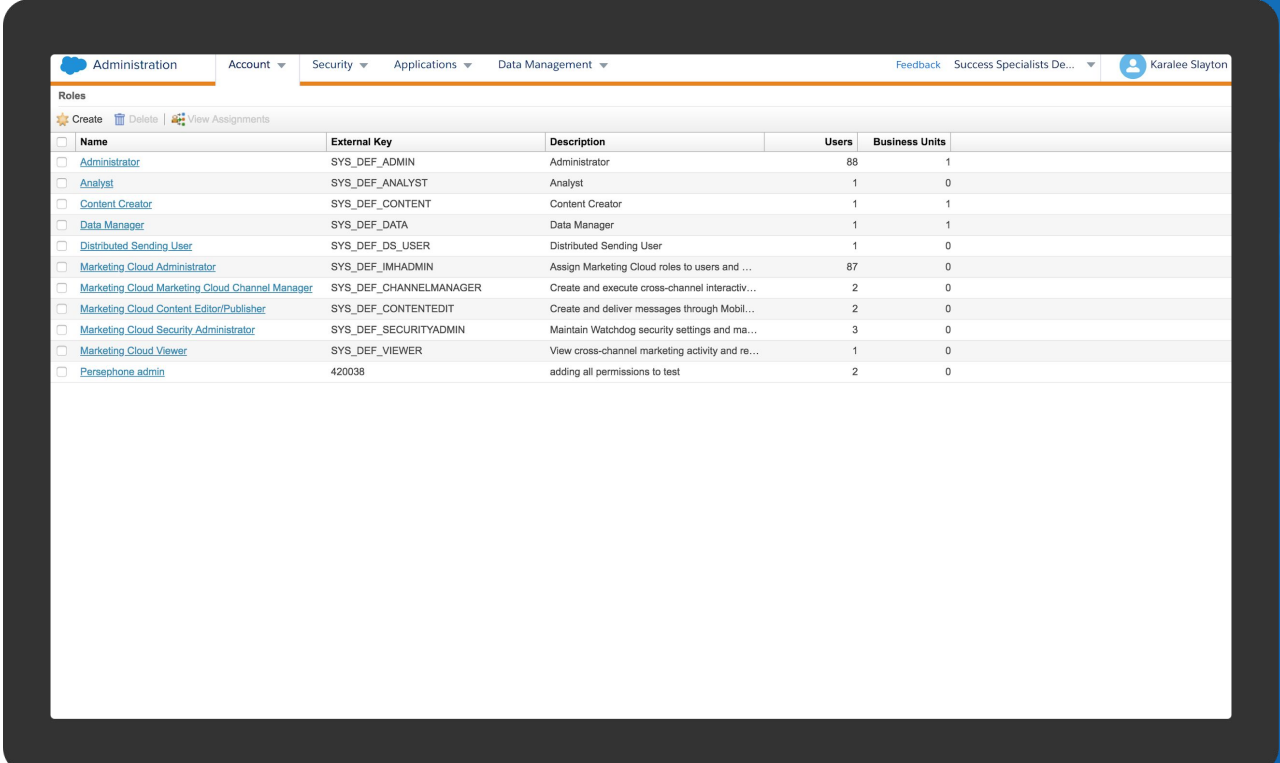

A role is a collection of permissions that allow or deny access to an application, to screens or specific functionality.

- Pre-defined roles can be assigned to any user based on default permissions.
- Pre-defined default roles cannot be edited.
- New roles can be created by the Administrator (E2.0).

Best Practices:

- Make roles broad enough so they can be assigned to multiple users within your organization.
- It's great to define new roles but do not delete default roles. Best practice is to clone a default role to make a new role.

*Note: The deny permissions that you set in a role override the allow permissions that you set on a particular user.

Name	External Key	Description	Users	Business Units

Marketing Cloud Standard User Roles

Each role includes a set of permissions that enable users to perform different tasks.

The following are the predefined roles in Marketing Cloud. *Default Roles Cannot be edited

Marketing Cloud Administrator	A person in this role assigns Marketing Cloud roles to users and manages channels, apps, and tools.
Marketing Cloud Viewer	A person in this role views cross-channel marketing activity that results in the Marketing Cloud.
Marketing Cloud Channel Manager	A person in this role creates and executes cross-channel interactive marketing campaigns and administers specific channels.
Marketing Cloud Security Administrator	A person in this role maintains security settings and manages user activity and alerts.
Marketing Cloud Content Editor/Publisher	A person in this role creates and delivers messages through applicable channel apps.

Learn more with a [detailed list of permissions by role](#).

User Roles – Classic Roles for Email Studio

Each role includes a set of permissions that enable users to perform different tasks.

The following are the predefined roles in Email Studio *Default Roles Cannot be edited

Administrator	Administrator role is for the manager of Marketing Cloud and all associated Enterprise 2.0 business units. This role has control over all aspects of the application and can create, share, modify, and delete anything in your company structure.
Content Creator	The Content Creator role can access all aspects of content creation, but it has no control over other aspects of Marketing Cloud, such as subscriber information or tracking results. The content creator produces the images and text used in an email and lays out the messages. Other roles then approve and send the messages.
Data Manager	Analyst role maintains subscriber records and publication or suppression lists. The Data Manager role handles data imports and exports. The data manager may create relationships that span multiple business units, but this role usually doesn't create or edit content.
Analyst	The Analyst role includes permission to read, change, and update all information related to email sends. However, users with this role are unable to create or make changes to content and subscriber lists or administer users.

Learn more with a [detailed list of classic permissions by role](#).

Defining Your Users

The administrator can:

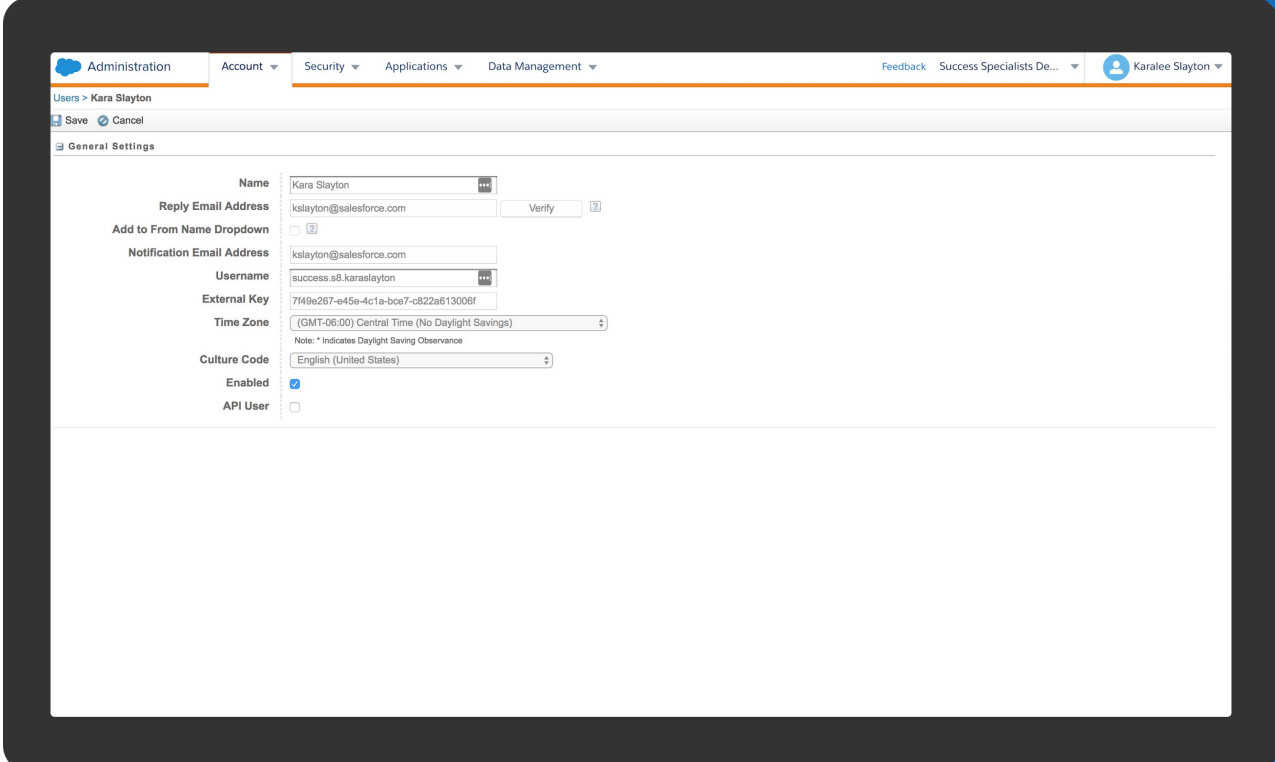

- Define which users or roles receive certain permissions.
 - i.e. which users are able to export data through role-based security.
- Assign a role or roles to a user, regardless of the business unit(s) that user is assigned to.
- Assign a role or roles to a user for a particular business unit.

Username	Full Name	Reply Email	Access	Permissions	Temporary PW

User Management

- [Reset a User Password](#)

The screenshot displays the Salesforce user management interface for a user named Kara Slayton. The page is titled "Users > Kara Slayton" and includes a navigation bar with tabs for Administration, Account, Security, Applications, and Data Management. The user's profile is shown with the following details:

- Name:** Kara Slayton
- Reply Email Address:** kslayton@salesforce.com
- Add to From Name Dropdown:**
- Notification Email Address:** kslayton@salesforce.com
- Username:** success.s8.karaslayton
- External Key:** 7f49e267-e45e-4c1a-bce7-c822a613006f
- Time Zone:** (GMT-08:00) Central Time (No Daylight Savings)
- Culture Code:** English (United States)
- Enabled:**
- API User:**

Security Settings

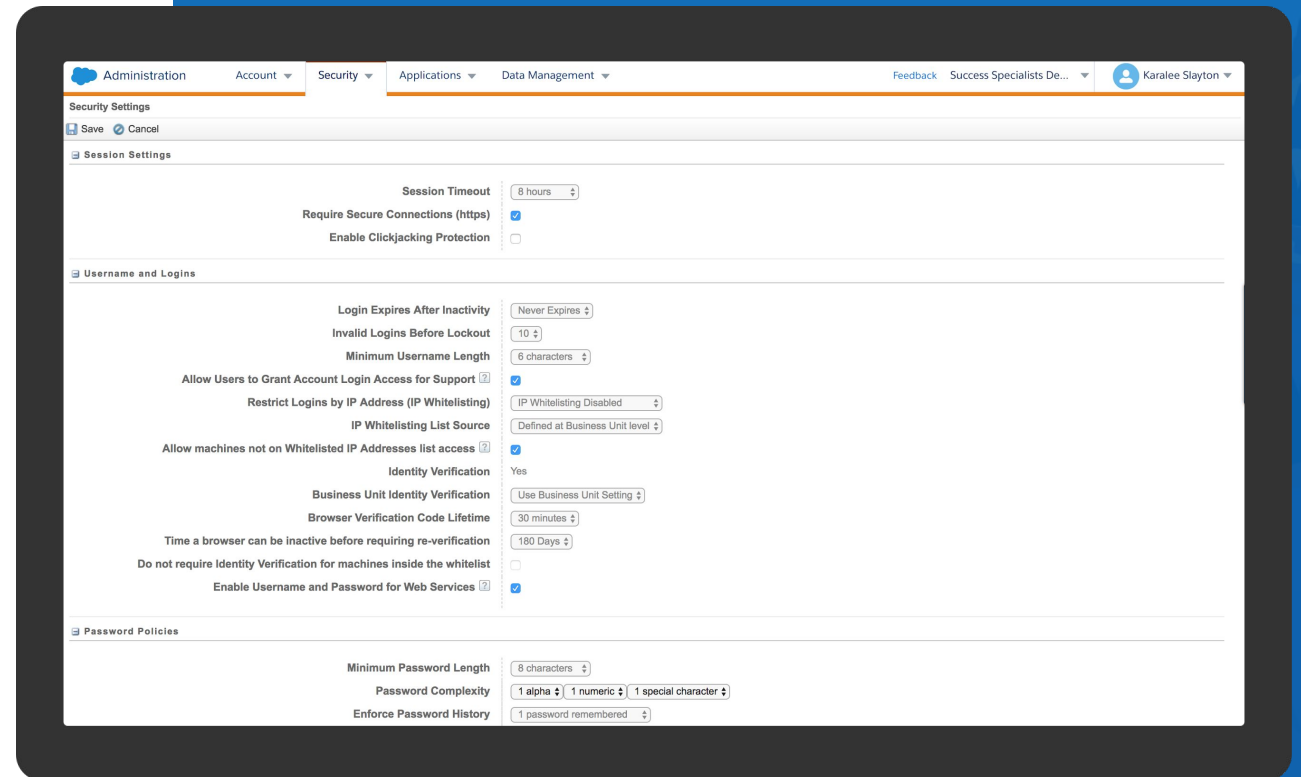

Manage Your Security Settings (1)

Security Settings allows you to define parameters for

- Session timeout
- Username and password conventions
- Lockout logic

These features help improve the overall security of your account.

Manage Your Security Settings (2)

Recommended Best Practices

Setting	Recommended Best Practice
Session Timeout	20 minutes as a best practice.
Login Expire	90 days or fewer as a best practice.
Invalid Logins	3 as a best practice.
Count Invalid Logins	Yes as best practice
Minimum Password Length	8 as a best practice.
Enforce Password History	8 as a best practice.
User Passwords Expire In	90 days as a best practice.
Exclude FTP Users from Password Expiration	DO NOT- Instead, ask FTP users to schedule a time to change the FTP user password when necessary.
Password Change Confirmation Email	Always enable as best practice.
Export Email Whitelist	Yes, ensure your data remains with trusted users as a best practice.
JavaScript rendering	Disable, unless you absolutely must include JavaScript in your preview.

Login IP Whitelisting

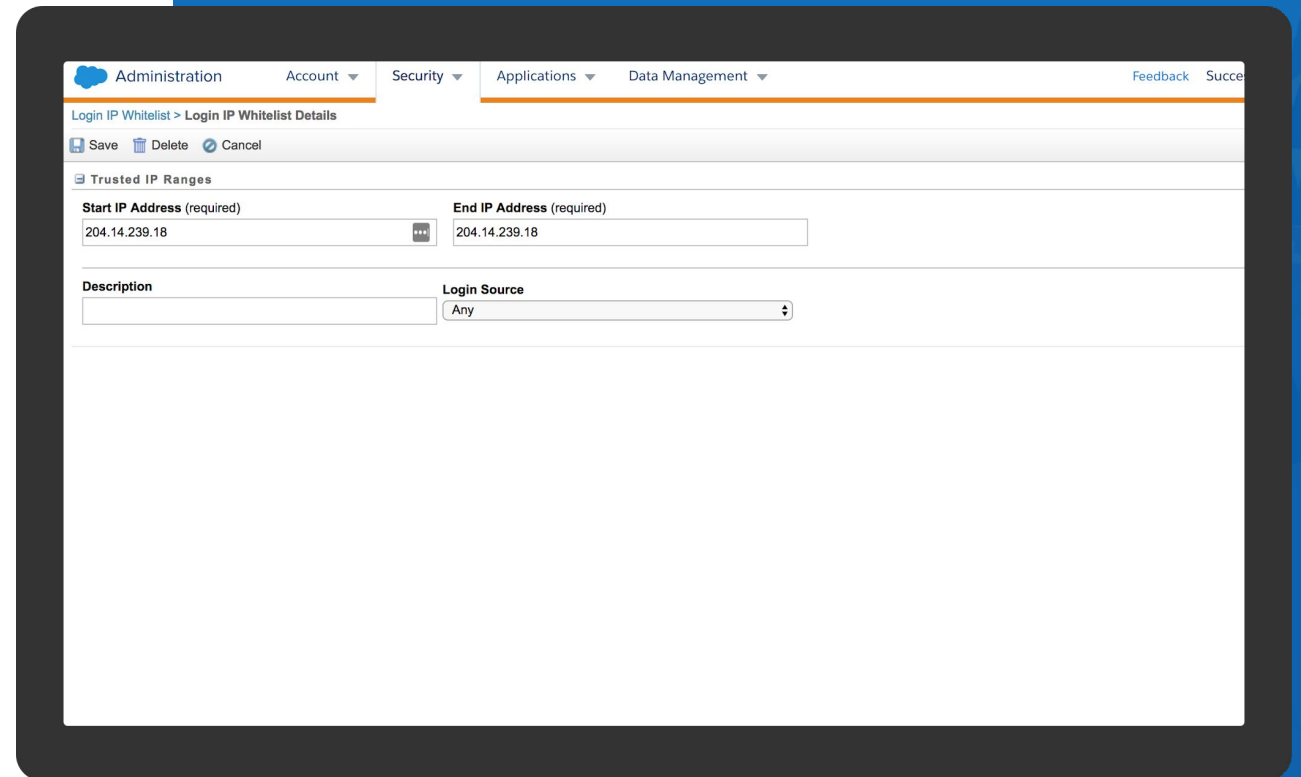

Prevent unauthorized access

Use Login IP Whitelist to improve system security and help prevent unauthorized access to your account.

- **IP Whitelisting Disabled** - this default setting does not allow you to whitelist any IP range. The access log will not track any IP ranges.
- **Log Whitelist Violations** - this setting records any non-whitelisted login IP address but permits the login attempt.
- **Log Violations and Deny Access** - this setting records any non-whitelisted login IP address and blocks the login attempt.

Learn more about [Login IP Whitelisting](#)

Contact your Marketing Cloud account executive to enable this feature for your account.

Identity Validation Access Log

Two-step Authentication

ID Validation Access Log allows you to view any recent validations.

This is a great place to look if a user is having trouble logging in, to see if they have validated their account first.

Deliverability

Getting Started

Deliverability Fundamentals

Understanding Email Deliverability

Deliverability is not necessarily the same as Delivered Rate.

Email Deliverability encompasses all the complexities involved with delivering your email to the intended recipients.

- It is estimated that up to 21%* of emails sent never make it to the inbox.
- Factors like content, authentication and infrastructure, list quality, subscriber engagement, spam filters, and more contribute to deliverability.
- Simply partnering with an ESP does not guarantee that your email will be delivered.

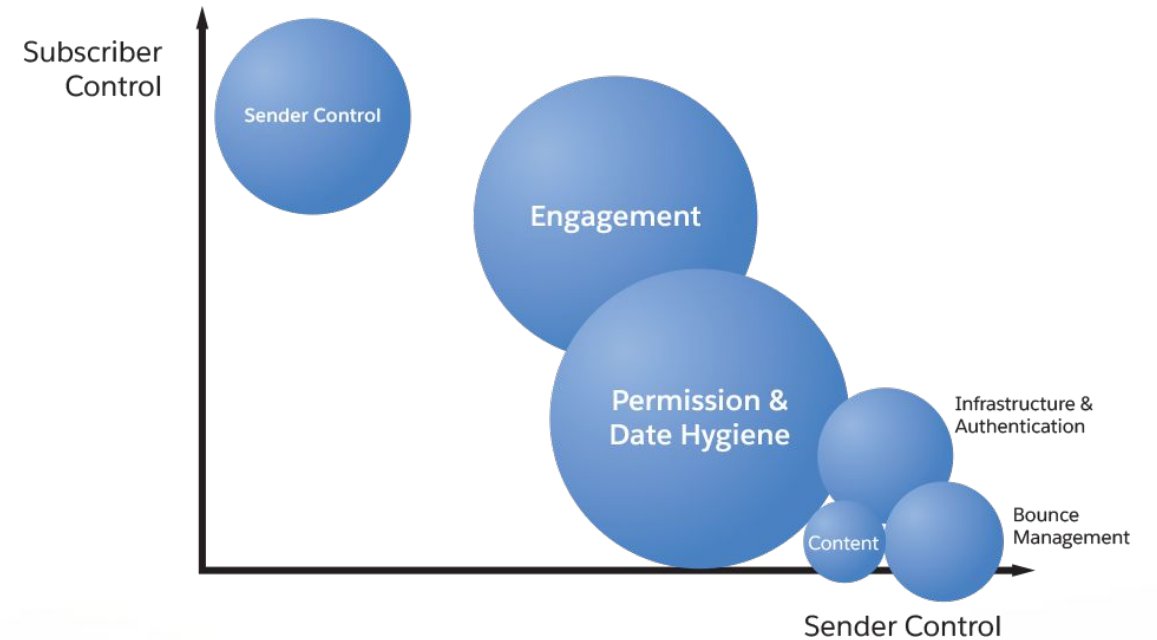

*Return Path Annual Survey Results

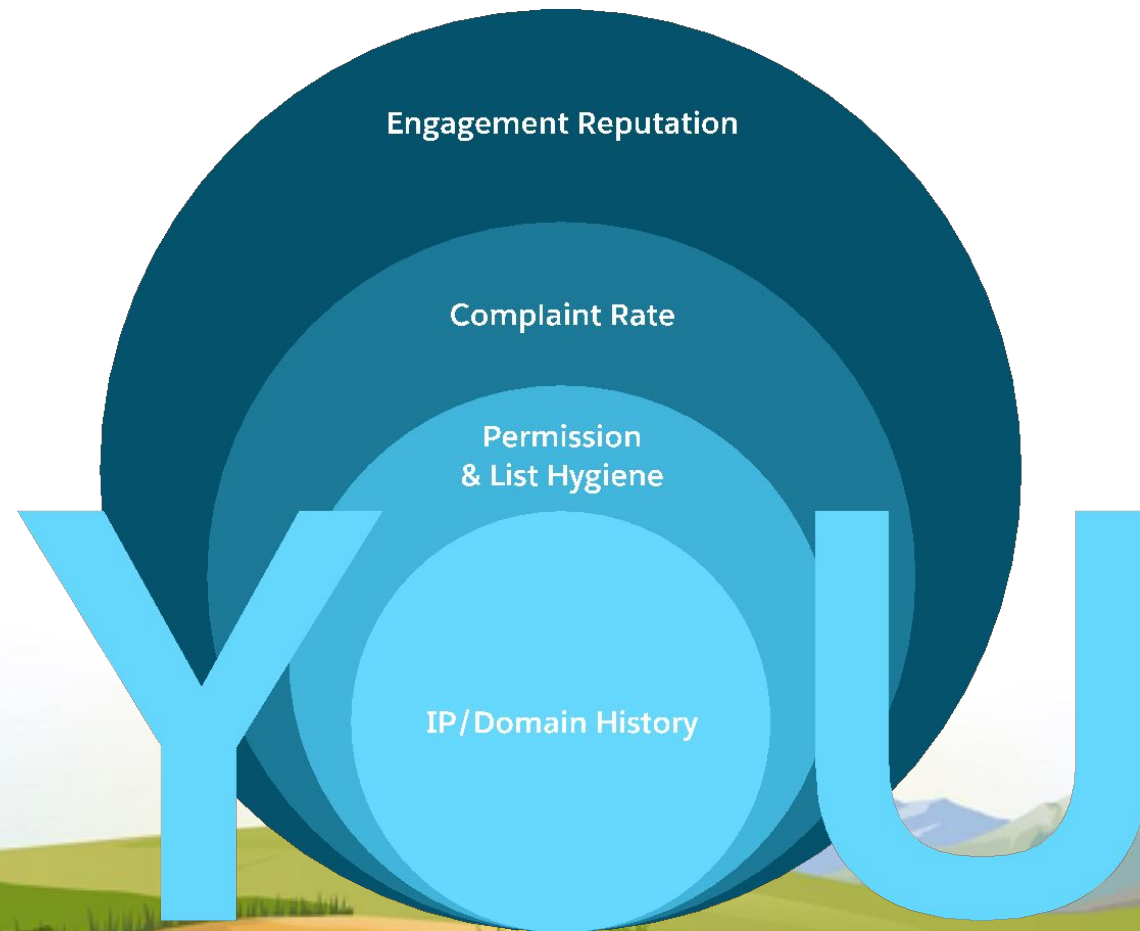

Understand the forces that affect your email delivery

Email deliverability is about your reputation as a sender.

- Mailbox providers collect data about clients' mailing practices to determine if they are a good or bad sender.
- They use this data to decide which mail is sent to the inbox and spam folder, or rejected.
- To increase your chances of reaching the inbox, you must have a solid understanding of what affects your delivery and deliverability.
- Often times Sender Reputation determines inbox placement.

Your Sender Reputation Precedes

Sender Reputation Directly Impacts Deliverability

Negative Impacts

Complaints

Complaints are the most important explicit action from end users, and they influence your reputation. This is the strongest signal that your end users do not like or want the mail you send.

List Hygiene

List Hygiene is all about the validity and health of your email lists. There are 3 different groups that negatively affect your List Hygiene:

- Unknown users
- Spam traps
- Inactive users

Authentication

Authentication is easy yet crucial in signing your mail properly to establish and prove who you are as a sender.

Spam Traps

Spam traps are legitimate addresses whose sole purpose is to catch the bad actors who are sent to either inactive addresses or unconfirmed opt-ins. Spam Traps are operated by many Blacklist operators, ISPs, and Spam Filtering Companies.

Positive Impacts

Permissions

Permissions is the most important email best practice. While simple, it is the cornerstone of building a positive reputation.

Frequency

Email frequency is one of the primary reasons why people may unsubscribe or opt-down the amount of email they receive.

Content

Content, by itself, typically isn't a problem regarding reputation. The reaction—or lack thereof—to content influences reputation more.

Engagement

Engagement is most commonly associated with opens and clicks, but can also include other explicit actions that marketers can't easily see.

Deliverability is a Practice to be Learned Early and Used Often

It is difficult to recover from a bad reputation

Implement best practices now by:

- Making corrective changes.
- Repairing broken processes.
- Testing and Monitoring.

Email Deliverability Best Practices

Permission is not Optional

Best practices in communicating with clients and prospects

Only communicate with subscribers that grant permission.

- They must know you, recognize the mail you send and be interested in your content and frequency of communications.
- Everyone on your subscriber lists must grant you permission for you to send them email via Marketing Cloud.

Comply with the guidelines in the Federal CAN-SPAM legislation.

- You are responsible for CAN-SPAM compliance of your company.

Most importantly, honor requests for removal from your mailing lists.

- Permissions, compliance, and deliverability success go hand-in-hand (-in-hand).

You will experience high complaint rates if your subscribers have not given you explicit permission to send them email.

Make List Hygiene a Priority

Best practices to identify and mitigate poor list quality

A bounce rate over 20% for any single mailing can have serious consequences.

- Create a process to identify inactive subscribers.
- Remove bounced addresses from your mailing lists between sends.
- Purge old or inactive addresses from your mailing lists.
- Honor your end users' requests to unsubscribe.
- Remove subscribers who haven't opened your emails in months.
- Audit sources of inactive addresses.

This will also help you avoid spam traps, as those addresses DO NOT open or engage.

For more information, see [Remove Hard Bounced Email Addresses](#).

Be Recognized

Best practices to ensure subscribers recognize an email is from you

Do people want your email and are your prospects engaged?

- Low engagement, high bounces, high complaints and bought lists
- all lead to bad delivery rates.
- All of the names on your subscriber lists must have given you permission in order for you to send them email via Marketing Cloud

Ensure that your 'from name' and 'from email address' are recognizable by subscribers. Include an actual company or brand name in the 'from address'.

- Some ISPs only show the 'from address', rather than the name and address of the sender.
- **Include your organization name in the subject line**
- Using your organization name in both the 'from address' and the subject line will decrease the chances your email will end up in spam folder.

Learn more with [Subject Lines Best Practices](#).

Create Engaging Content

Best practices in how content affects engagement and deliverability

Make it relevant. Give readers a reason to open and take action.

- Many recipients open email based on subject line alone.
- Recipients often only read the subject line or the first few lines of an email. Include your CTA early on in your message.
- Segment based on preference and history, and personalize the message.

Test every message before sending.

- Ensure proper rendering and identify potential spam filter issues before you send.

Balance text and imagery.

- Don't create messages as a single large image, as this is a common spammer technique used in attempt to bypass spam filters.
- Avoid using URLs or images that link back to third parties or have questionable reputation.

Learn more with the [Email Design Toolkit](#)

Reduce the Chances of Complaints

Best practices to ensure your email is warranted and wanted

Make sure you have Express Consent to mail.

Don't buy/rent lists; Know who your data partners are.

**Are you sending your emails more often than you promised?
Less often?**

Is the content different from what you promised?

- People may unsubscribe, opt-down or complain about the amount
- of email they receive. Provide options to customize their mail
- volume and cadence.

Conduct complaint analysis:

- Complaints are visible to senders through publically available FBLs from the ISPs.
- Complaints can be monitored through your SMC general tracking reports, listed as unique complaints and complaint rates.

CAN-SPAM: US Federal Anti-Spam Law

All Marketing Cloud clients must comply with CAN-SPAM and any relevant anti-spam legislation relevant to their country or region.

- **Promptly unsubscribe** users after they request it. Manage unsubscribe within 10 days and enforce them across your enterprise.
- **Opt-in is king!** Always capture opt-in or affirmative consent to remove labeling requirements -- and to comply with Marketing Cloud's permission requirements.
- **Ensure that subject lines** are not deceptive or misleading.
- **For transactional** or relationship messages, ensure that the subject line is non-promotional and that the transactional content is placed above any commercial content.
- **Sending unsolicited email puts your brand and company at risk.** ISPs actively attempt to identify and block senders who send unsolicited mail. This is allowed under the law.
- For information on CAN-SPAM compliance, [see CAN-SPAM Compliance System Guide](#).

Marketing Cloud Deliverability Features & Functions

Marketing Cloud Deliverability Features and Functions

Marketing Cloud offers several tools and alerts to help you optimize your deliverability, including:

<u>Bounce Mail Management</u>	This feature helps improve deliverability by automating suppression of bad addresses over time.
<u>List Detective</u>	A proprietary suppression list of known spam traps and known domains that no longer provide email service. It is designed to protect senders from mailing to commonly known bad domains.
<u>Content Detective</u>	This tool helps you identify spam triggers in your email content. This feature mirrors the logic used by spam-filtering software to identify words, phrases, and patterns likely to trigger filters and then recommends a resolutions
<u>Email Validate</u>	Checks your email message for common issues that could prevent your email from being sent. Validate your email and make corrections before starting any sending process. Validate is included in Subscriber Preview in Content Builder.
<u>Reply Mail Management</u>	Automates reply management, including manual leave or unsubscribe requests received in the form of a reply.
<u>Bounce Detective</u>	Receive a trigger-based email notification when domains exceed certain bounce threshold percentages. (By request only).
<u>Reputation Audit</u>	This email audit shares results analyzing authentication, reputation, DNS checks, blacklistings, and headers. (By request only).
<u>Deliverability and Engagement Reporting</u>	My Tracking and Standard reports are available to monitor email performance and deliverability trends in many different ways.

Bounce Mail Management

Four Primary Bounce Reasons

SOFT BOUNCE

Email server rejects mail due to a temporary condition.

- Mailbox is full
- Connection timing out

SMC will retry sending the email to the subscriber every 15 minutes for 72 hours (288 attempts) before changing their status to “bounced”.

HARD BOUNCE

Email server rejects the email due to permanent condition.

- User unknown
- Invalid email account
- Address not existent

SMC will automatically change status of subscriber who hard bounces from trusted domains after 1 hard bounce. (Gmail, RR, and Hotmail)

BLOCK BOUNCE

Email server rejects the email due to filter issues, authentication failures, spam or reputation issues.

- Blacklist
- Failed authentication
- Spammy characteristics or content
- Excessive complaints/trap hits
- Phishing/Spoofing

Blocks are a direct result of poor reputation

TECHNICAL BOUNCE

Considered a type of soft bounce, email server rejects the email due to technical errors.

- Server overwhelmed, too busy
- Data format error
- Network error

AOL will technical bounce mail with large volume spikes.

Free Tools to Monitor Your Reputation

Bounce Detective

A proactive email alert sent if recent send has an elevated bounce rate at any domain with 25+ recipients.

Note that this does not monitor triggered sends or automations, only on batch sending.

This works at the enterprise level -- if set up at enterprise level, all child accounts (business units) are monitored.

Want Bounce Detective?

- Submit a support case to request that Bounce Detective be enabled.
- Specify who should receive alerts.

Free Tools to Monitor Your Reputation

Reputation Audit

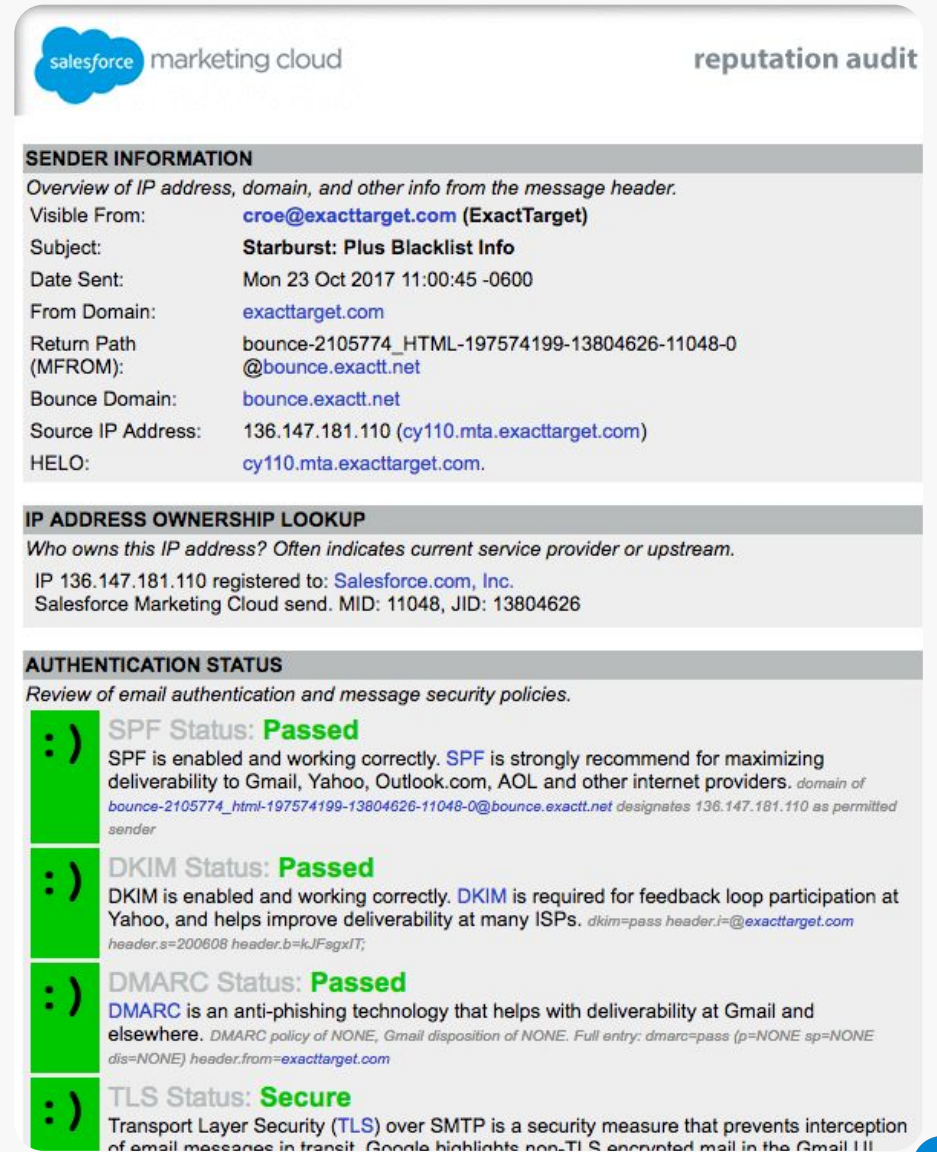

We have a FREE tool called REPUTATION AUDIT where clients can send an email to a special address to be tested.

Results will include authentication results (such as DKIM, SPF, TLS and DMARC)

Plus SpamAssassin spam filter content scoring, blacklist checks, and more!

From our email platform, send your email message to reputation@etreputation.com

Then submit a case via our help and training portal to request that support forward you results. Be sure to tell support your FROM ADDRESS and SUBJECT LINE so they can find the right message (and correct reporting results.)

The screenshot shows a 'reputation audit' report from Salesforce Marketing Cloud. It is divided into four main sections: SENDER INFORMATION, IP ADDRESS OWNERSHIP LOOKUP, AUTHENTICATION STATUS, and a final TLS Status section. Each section includes a brief overview and specific data points.

SENDER INFORMATION
Overview of IP address, domain, and other info from the message header.
Visible From: croe@exacttarget.com (ExactTarget)
Subject: **Starburst: Plus Blacklist Info**
Date Sent: Mon 23 Oct 2017 11:00:45 -0600
From Domain: exacttarget.com
Return Path (MFROM): bounce-2105774_HTML-197574199-13804626-11048-0@bounce.exact.net
Bounce Domain: bounce.exact.net
Source IP Address: 136.147.181.110 (cy110.mta.exacttarget.com)
HELO: cy110.mta.exacttarget.com.

IP ADDRESS OWNERSHIP LOOKUP
Who owns this IP address? Often indicates current service provider or upstream.
IP 136.147.181.110 registered to: [Salesforce.com, Inc.](http://Salesforce.com)
Salesforce Marketing Cloud send. MID: 11048, JID: 13804626

AUTHENTICATION STATUS
Review of email authentication and message security policies.

- SPF Status: Passed**
SPF is enabled and working correctly. SPF is strongly recommend for maximizing deliverability to Gmail, Yahoo, Outlook.com, AOL and other internet providers. domain of bounce-2105774_html-197574199-13804626-11048-0@bounce.exact.net designates 136.147.181.110 as permitted sender
- DKIM Status: Passed**
DKIM is enabled and working correctly. DKIM is required for feedback loop participation at Yahoo, and helps improve deliverability at many ISPs. dkim=pass header.i=@exacttarget.com header.s=200608 header.b=kJFsgxIT;
- DMARC Status: Passed**
DMARC is an anti-phishing technology that helps with deliverability at Gmail and elsewhere. DMARC policy of NONE, Gmail disposition of NONE. Full entry: dkim=pass (p=NONE sp=NONE dis=NONE) header.from=exacttarget.com
- TLS Status: Secure**
Transport Layer Security (TLS) over SMTP is a security measure that prevents interception of email messages in transit. Google highlights non-TLS encrypted mail in the Gmail UI

Marketing Cloud Reporting

Here are some reports that are useful for deliverability-related purposes.

Look at your send statistics in **My Tracking** -- specifically, open rate and bounce rate.

- 15%+ is a great open rate. 10-15% is an OK open rate.
- Is your bounce rate greater than 10%? You may be experiencing ISP blocking.

Run the [Subscriber Engagement Report](#) to pull information into a third-party program, like Microsoft Access, to query emails not clicked or opened.

To identify unknown user rate, look at general tracking reports that show **Unique Hard Bounces** and **Hard Bounce Rates**. This metric captures the amount of invalid or unknown users that have landed on your file and are being mailed to.

Individual Job Tracking in Email Studio

Walk With Me

Click "Sends"

The screenshot shows the Salesforce Email Studio interface. The top navigation bar includes 'Email', 'Overview', 'Content', 'Subscribers', 'Interactions', 'A/B Testing', 'Tracking', 'Admin', 'Audience Builder', 'Feedback', and 'Success Specialists De...'. The user profile 'Karalee Slayton' is visible in the top right.

The left sidebar shows a 'Tracking' menu with categories like 'My Tracking', 'My Reports', and 'My Data'. The main area displays a 'My Tracking' table with columns: Job ID, Name, Date, Status, Emails Sent, Unique Click-Through Rate, Open Rate, and Deliverability Rate. A callout '1' points to the 'Sends' button in the top navigation. A callout '2' points to the 'Name' column header. A callout '3' points to the 'May Blog Email' row name.

Where to find Reports in Marketing Cloud

Walk With Me

The screenshot shows the Salesforce Marketing Cloud interface. At the top, there are navigation tabs for 'Calendar', 'Campaigns', and 'Playbooks'. Below these is a horizontal menu with various tool icons: Email Studio, Mobile Studio, Social Studio, Advertising Studio, Web Studio, Interaction Studio, **Analytics Builder** (highlighted with a red circle and '1'), Journey Builder, Content Builder, Personalization Builder, Audience Builder, AppExchange, and Platform. To the right of the menu, there are options for 'My Apps' and 'All Apps', and a user profile for 'Karalee Slayton'. Below the menu is the 'Report Catalog' section. On the left, there are filter options for 'Tools and Apps' (All, Campaigns) and 'Report Type' (All, Administration, Custom, Discover, Standard). Below these are 'Features' and 'Reportable Data' filters. The main area is a table of reports with columns for 'Report Name' and 'Actions'. The 'Reports' option in the dropdown menu is highlighted with a red circle and '2'. The table lists various reports such as 'A-B Test Summary Report', 'Audience Engagement Over Time', 'Best Performing Send Day', etc., each with a 'Create' button.

Sender Authentication Package (SAP)

Control your branding by mapping your domain name onto Marketing Cloud.

Includes branded links and email headers, a dedicated IP address, email authentication with DKIM and SPF, and reply handling with reply mail management.

Do you have Sender Authentication Package?

- Did you fill out the online form to choose your domain name?
- If you're not sure, contact support for assistance.

When you have Sender Authentication Package, be sure to use your Sender Authentication Package Domain in your from address.

- If your Sender Authentication Package domain is “email.domain.com” you should always send as (something)@email.domain.com for all email sends from Marketing Cloud. This is necessary to get the full deliverability benefit of this functionality.
- With this domain, your from email addresses will automatically be verified.

What is IP Warming? Why is it Important?

How to gradually increase email volume while establishing your reputation

“Backlash of not warming your IP properly will lead to months of trouble.”

Sri Somanci
Google Postmaster

IP warming is the practice of methodically increasing email volume sent via a new dedicated IP address according to a predetermined send schedule.

This gradual process helps senders establish a reputation with ISPs and identify as a legitimate sender.

Sender reputation is closely tied to IP address. When sending from a new IP address, ISPs have no reference point to determine legitimacy or reputation. Since delivery and inbox placement are linked to sender reputation, it is crucial to execute IP warming successfully.

IP Warming Timing and Expectations

Understanding the journey of IP warming

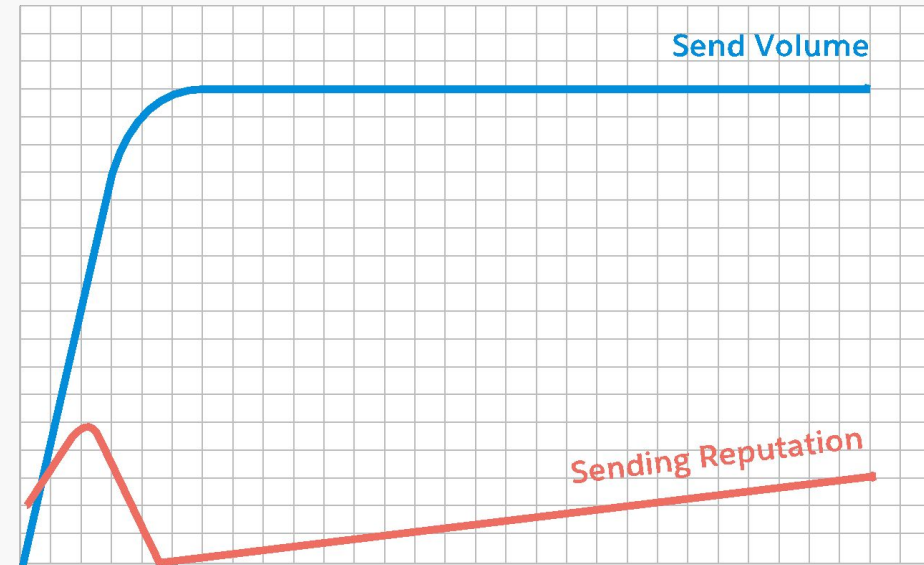

Minimum of 4 weeks to establish an identity and reputation with ISPs.

Influencing factors include send cadence, volume, complaints, bounces and engagement.

Specific volume thresholds per domain for each day of each week to follow, while building volume steadily week over week.

Send Cadence: minimum 3 days a week to establish proper cadence and sending patterns.

Focus on most engaged subscribers to help boost engagement and help limit bounces/complaints.

IP Warming Calendar

Build your sending reputation

Limit volume per domain day-by-day.

Segment per domain, starting Gmail off a bit slower.

If segmentation by domain is not possible, use the alternate simple calendar.

Slower, but has easier segmentation

Limits overall volume per IP address in a way that should fall within with per-domain guidelines

ISP/Domain	Day 1-3	Day 4-5	Day 6-7	Day 8-14	Day 15-21	Day 22-28	Day 29+
AOL/Yahoo	20,000	20,000	20,000	40,000	80,000	160,000	320,000
Microsoft	20,000	20,000	20,000	40,000	80,000	160,000	320,000
Gmail	5,000	10,000	20,000	40,000	80,000	160,000	320,000

Sending Administration

Understanding Send Classifications

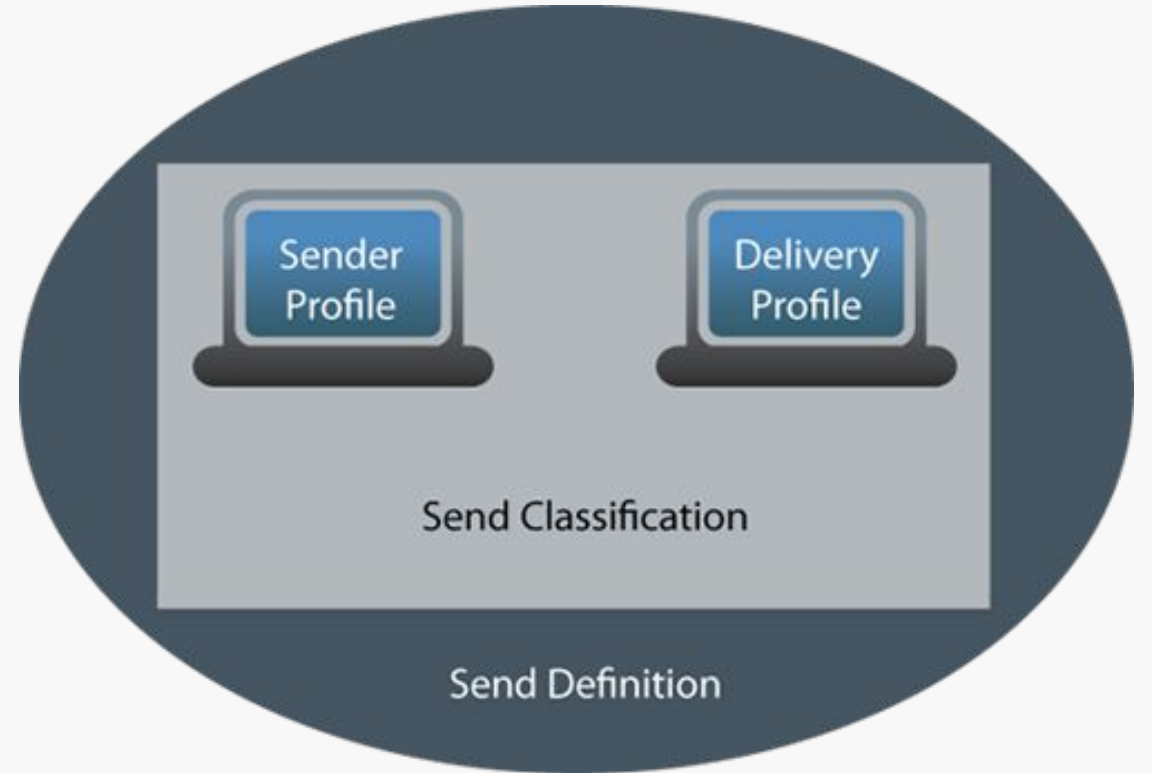

Your send definition

Define parameters for an email job in a central location and reuse those parameters for multiple email send definitions.

Send classifications include these components:

- Delivery Profile
- Sender Profile
- CAN-SPAM classification

Learn more with about [Send Classifications](#)
Learn more about [CAN-SPAM in the Legal Compliance Trail](#)

Sender Profile

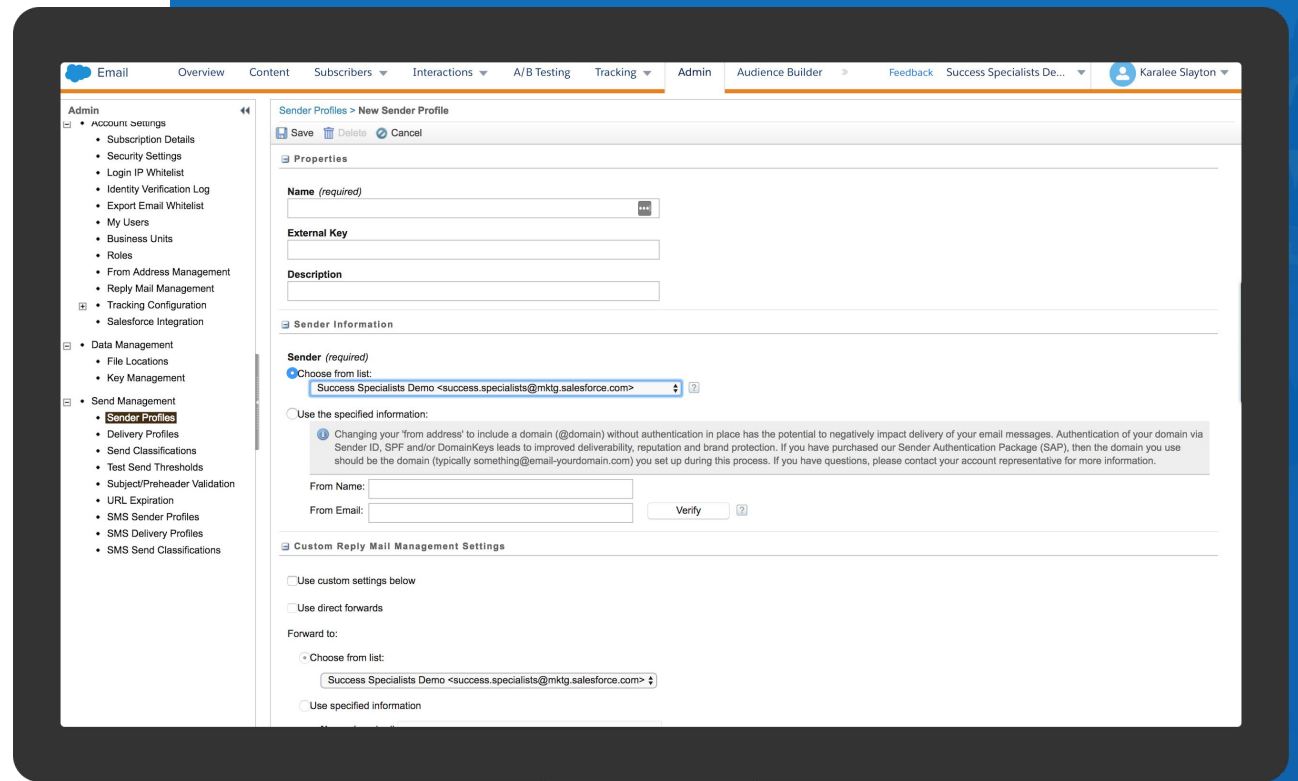

Your From Name

Specify the From information for emails in a central location to be reused across multiple sends without requiring selection each time.

The sender profile will contain the name and address that the message appears to be from in the subscriber's email client.

From Name Discovery

- Is your From name a user from the drop down menu? Yes or No
- Do you need to add a specific name in? Yes or No
- If you need a specific name, what will it be? Name
- Do you have permission to use this name and email? Yes or No
- Has this From email Domain been verified? Yes or No

Learn more with about [Sender Profile](#) and [Domain Verification](#)

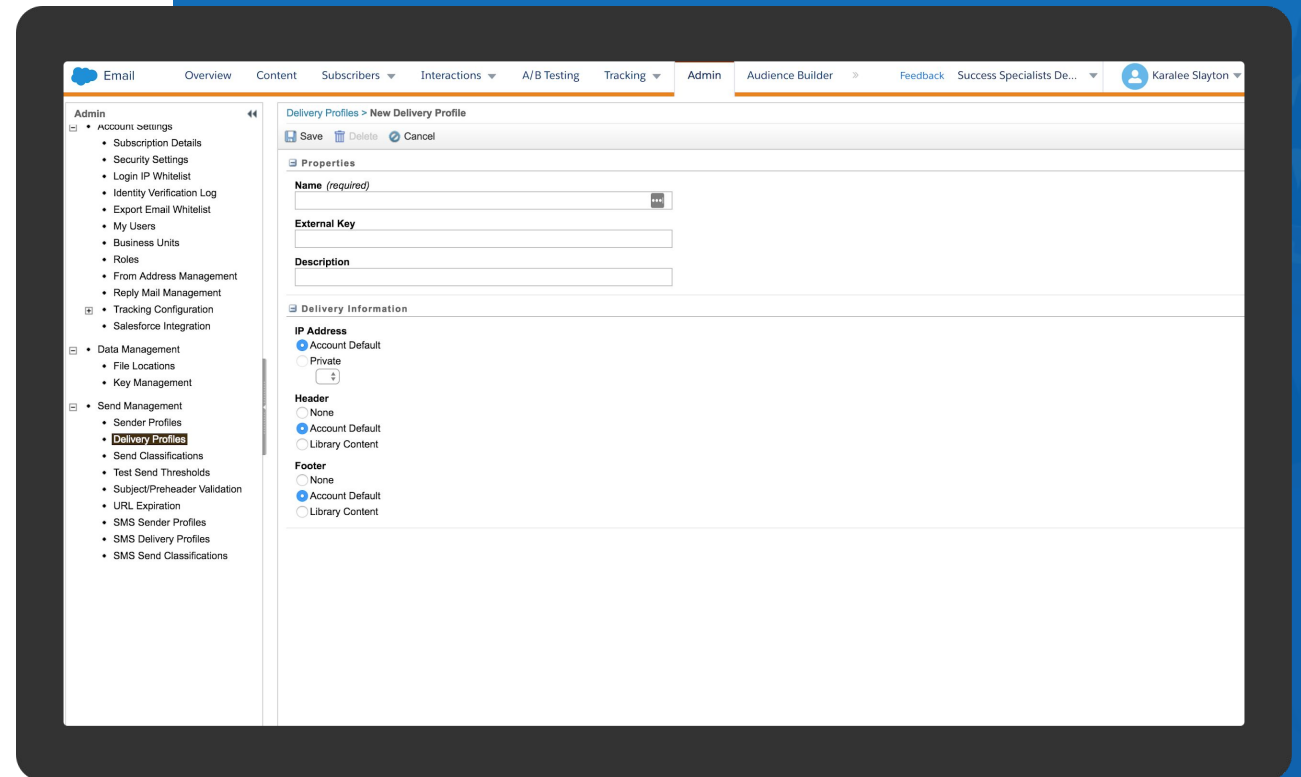

Delivery Profile

Type of Email Send - Planning Template

Commercial emails are when the primary purpose of the message is to deliver commercial content. These **MUST** include your physical mailing address and provide an opt-out/unsubscribe mechanism.

Transactional emails are when the primary purpose is to deliver transactional content. An unsubscribe link is not required in transactional messages.

You may choose a specific header or footer to use with the delivery profile.

Planning Send Classifications

Preparing before sending - Use a Planning Template

Email	Type	Sender Profile	Delivery Profile
	<input type="checkbox"/> Commercial <input type="checkbox"/> Transactional	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/> Commercial <input type="checkbox"/> Transactional	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/> Commercial <input type="checkbox"/> Transactional	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/> Commercial <input type="checkbox"/> Transactional	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/> Commercial <input type="checkbox"/> Transactional	<input type="checkbox"/>	<input type="checkbox"/>

Reply Mail Management

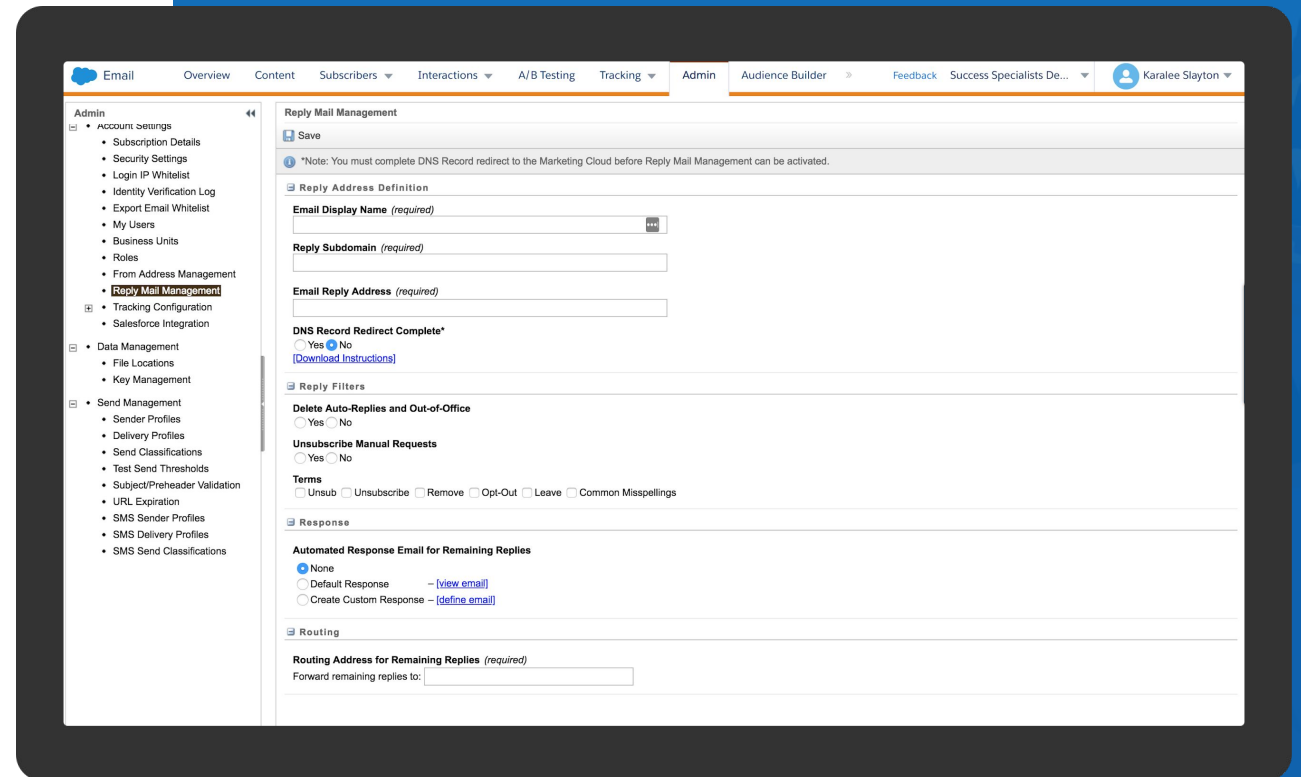

Automatically manage replies received in response to your emails.

- Forward an email to different users depending on different circumstances.
- Conditionally auto-reply and control the content of that auto-reply message.

You can perform parts of the configuration in the Marketing Cloud application interface. Other parts require help from your ISP.

*Contact your Marketing Cloud account representative to request a Sender Authentication package or a request for RMM services if you did not purchase the SAP product.

Learn more with about [Reply Mail Management](#)

Email Infrastructure, Authentication, and Products

Marketing Cloud is built on a strong infrastructure that offers additional options for authentication and performance, including:

Dedicated IPs	New, dedicated IP addresses for qualifying senders to send email.
Private Authenticated Domains.	Fully authenticated From sending domains to send mail.
Dedicated MTAs.	A dedicated MTA environment can be provided to qualifying customers with the right volume needs. The MTA connection and throughput settings can be optimized by ISP receiver
Sender Authentication Package.	This optional package provides full authentication and branding. It includes a dedicated IP address, a private authenticated domain, reply mail management, as well as link and image wrapping and branding.
Sender Policy Framework.	A DNS entry that identifies which mail servers are permitted to send email on behalf of your domain.
Domainkeys Identified Mail (DKIM).	This domain-based authentication uses both public and private encryption keys, not specific to IP address.
Transport Layer Security (TLS).	We provide opportunistic TLS for encryption of mail during transit from Marketing Cloud to the destination ISP.
Feedback Loops (FBLs).	We sign up and enroll all IP addresses for publicly available FBLs on behalf of our customers.

Marketing Cloud integration with Return Path

A comprehensive set of deliverability and email rendering tools.

Take it to the next level by using **INBOX MONITOR** to directly measure inbox-versus-spam folder placement for campaigns as they are sent.

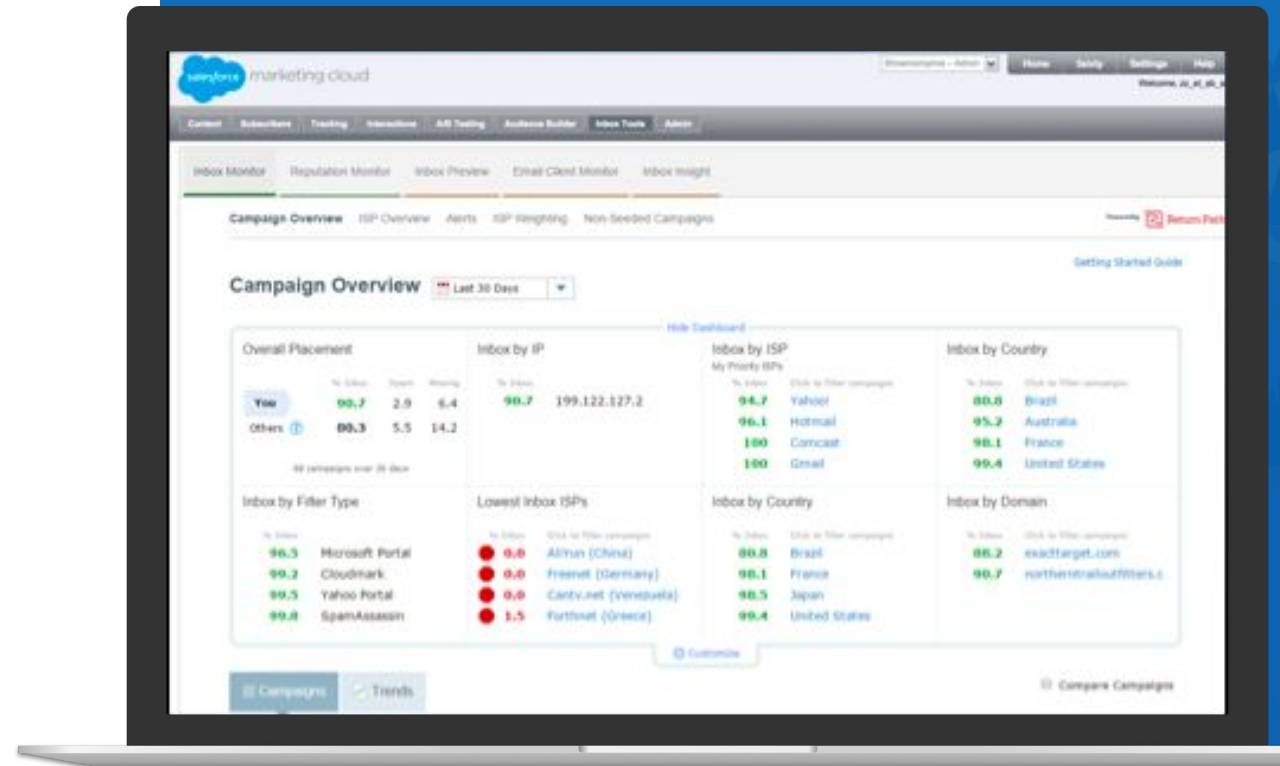

Setup alerts to proactively warn you of deliverability issues at specific ISPs as they happen.

Use **INBOX PREVIEW** to test rendering of your content at more than 35 different email clients on desktop, mobile, and webmail.

Identify root cause of issues and key factors affecting reputation using **REPUTATION MONITOR**.

Track opens-by-platform and length of engagement using **EMAIL CLIENT MONITOR**.

Deliverability Best Practices

Reputation and deliverability checklist:

- ✓ Organic list acquisition and explicit opt-in with clear expectations.
- ✓ Button up mailing infrastructure and authentication.
- ✓ Routine maintenance on list hygiene, review and manage bounces.
- ✓ Focus on active and engaged audiences (i.e. trim the fat).
- ✓ Create a 1:1 relationship with your customer with compelling and personalized content.
- ✓ Listen to your customers, email is a 2 way street.
- ✓ Test and analyze, then test some more. Use the many deliverability focused resources available.
- ✓ Ask for help, that's why we are here!

Resources and Next Steps

Third Party Deliverability and Reputation Tools

There are several partner apps available for deliverability concerns, including:

[Litmus](#) helps you identify mobile email openers, quickly proof campaigns, and troubleshoot rendering issues.

[Return Path](#) offers a comprehensive suite of deliverability monitoring and rendering testing tools.

[Digioh](#) can help increase opt-in rates and capture new email subscribers.

[eDataSource](#) offers an Inbox Tracker so you can monitor the inbox placement of your email campaigns and benchmark deliverability against your main competitors.

[AudiencePoint](#) pinpoints the best time to connect with each subscriber with proprietary send time optimization capabilities.

[Mail-Tester](#) - A silly user interface, but useful tool. Checks SPF, DKIM and DMARC authentication. Checks for blacklistings. Reviews content score with SpamAssassin.

[Microsoft Header Analyzer](#) and [Google Header Analyzer](#) - Use header parsing tools to troubleshoot ISP delivery delays
